

Design with Intention, Not by Default.

Enterprise Architecture (EA) is a standard function in all organizations driven by large IT missions and infrastructures. EA design is intended to provide an enterprise roadmap that serves as a “GPS” that the entire organization can use to stay on-course and at-speed to arrive at their strategic destination. However, this is rarely the case. It’s common for IT implementers not to “test-drive” an EA design before implementation, and EA design is often locked away in disparate tools and inaccessible by other IT decision-makers. This disconnect inevitably leads to duplicated systems, cost overruns and unrealized ROI of existing investments, because EA drawings aren’t available in a useful way to the decision-makers, projects, programs and systems they are intended to reflect, help and oversee.

Effective, Practical EA Design that Aligns Your Entire Enterprise.

IQ’s enterprise architecture tools can be used by anyone to keep the value chain connected, share data, guide change, and execute services.

Ground Your Enterprise IT in Data Truth.

Many CIOs are rightly asking for “data truth” to more effectively manage their enterprise technology. Within EA and IT Portfolio Management, data truth means a number of things all at once. First, **near real-time data is necessary to keep pace with IT technology programs** underway and the need to constantly monitor and execute compliance activities. Second, **the data must be authoritative and come from a system of record that is shared** not just by the IT architects but also by the Program Managers and other stakeholders in the enterprise. Finally, **EA drawings are still a critical way to communicate the enterprise design, but now these drawings must be data-driven.** In other words, every drawing in the approved EA should have functional description, because it’s these descriptions and other created data that inform the EA drawings.

The overall effect of a data truth and data-driven approach is to create an enterprise-level management tool set that enables every participant in the enterprise management or analysis team to interact with the same information.

A Data-Driven Approach to EA Management.

More than ten generations of the IQ platform have helped enterprises use their data to design EA that does more. For decades, InQuisient’s tool suite has supported thousands of users in large enterprises to successfully manage billions of dollars’ worth of projects. From Fortune 500 and Federal Government customers, InQuisient enables all enterprise roles, from Chief Architects to IT Portfolio Managers, to effectively design and manage their enterprise technology. Since 2004, InQuisient has pioneered the data and truth-driven approach to EA management that’s shaping the future for enterprises.

Who Benefits Most from IQ Architect?

- ✓ Executive Leadership
- ✓ Systems Architects
- ✓ CIOs, CTOs, PMOs, and COOs
- ✓ IT Portfolio Managers
- ✓ Program Managers

Architect the Future of Your Enterprise.

DATA-DRIVEN EA DRAWINGS

Leverage Drawing Objects as actual data in the system.

Reuse, link, edit, and report on anything and eliminate data being trapped inside proprietary drawings. IQ Architect can also autogenerate drawings from your data without the drawing tool, allowing any information to be shared across the enterprise.

WORLD CLASS DATA REPOSITORY

Configure any data requirement without needing skills.

Relational database metamodels, patented extensions, and state-of-the-art MDM capabilities are built right into the IQ platform, allowing you to quickly and easily configure any data requirement and instantly achieve a working system.

FAST TIME TO IOC

Simple, intuitive tools made for every knowledge worker.

IQ's intuitive tools and Web service SOA architecture makes it possible for the average IT worker and architect to build forms, add data, and collaborate. Time to IOC using IQ has been as little as 4 months from install to achieving IOC in the largest enterprises.

NO-CODE, VISUAL EA BUILDER & DRAWING TOOLS

Build EA design without needing expensive DB Developers.

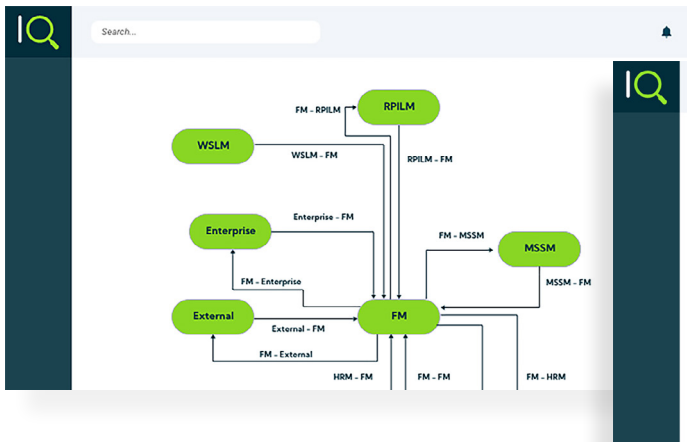

IQ's web services approach eliminates the need for expensive DB developers to build out your enterprise architecture. Retain total control of EA initiatives, increase agility and lower your Total Cost of Ownership substantially with IQ.

AFFORDABLE, NONDISRUPTIVE SOLUTION

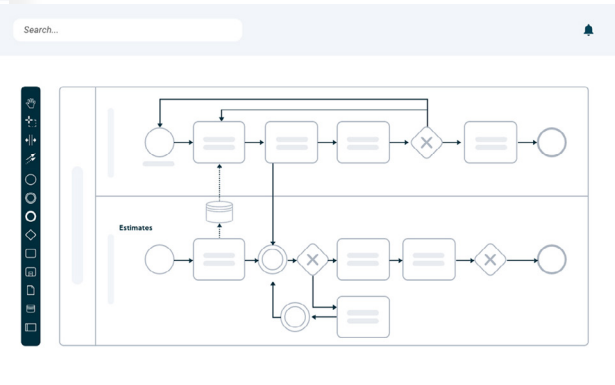

Internally architect a data-driven, nondisruptive design built on data truth.

InQuisient uses your existing enterprise infrastructure to both minimize operational disruption and greatly speed digital transformation, while lowering TCO dramatically.
