

# IQ Asset Manager

Gain control of “right now” and make a clear roadmap of the path to your future.

## Who Benefits?

IQ Asset Manager analyzes your IT asset data to detect weaknesses and vulnerabilities, delivering authoritative data to ensure approved/unapproved lists are actionable.

This technology benefits leaders and team members from all levels of the organization, including:

- ✔ Agency Leadership
- ✔ Program Managers
- ✔ Project Managers
- ✔ CIOs, CTOs, PMOs, and COOs
- ✔ IT Asset Managers
- ✔ System Owners
- ✔ IT License Managers
- ✔ SETA Contractors

## Align & Unlock Enterprise IT Assets & Strategic Planning

IQ Asset Manager’s **powerful graphing capabilities combine with enterprise asset data, allowing you to generate real-time network diagrams that seamlessly integrate with best-of-breed repositories and other asset management tools**, like BDNA Technopedia, ensuring the fidelity and authority of the data.

**Gain valuable insights into the management and control of your IT stack, as well as your entire IT portfolio to identify gaps and inconsistencies.** With IQ’s Asset Manager tool, you can easily spot what’s missing, what’s actually being used, and what needs to be renewed or replaced, so you can effectively manage and maximize your assets.

## Smarter IT Asset Management. More Strategic Planning Insight.

For large organizations, simple tracking of IT assets and keeping basic lists up-to-date is a never-ending challenge, enormously difficult and fraught with human error. Aligning current asset management with strategic IT planning is frequently impossible because these systems are so disparate.

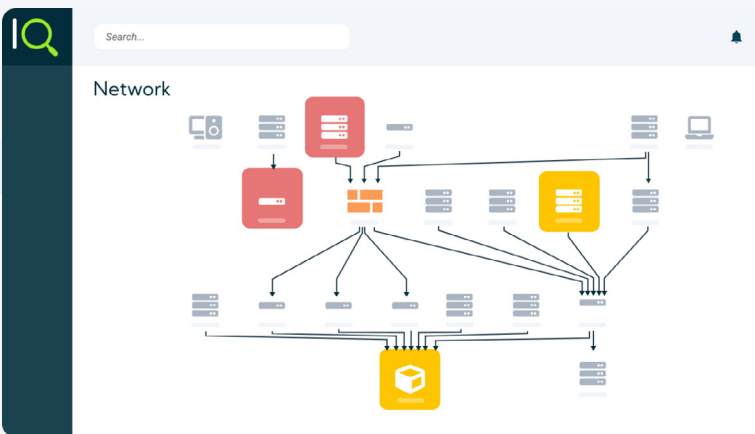

IQ Asset Manager lets organizations move away from error-prone manual entries to authoritative data that’s machine-generated and correlated. Working on top of the IQ Platform, Asset Manager lets you clearly see information from strategic planning to the operational environment, and connects the dots along the operational process.

**The tools within IQ Asset Manager make managing your IT assets dramatically more accurate and effective, since it creates a single source of truth for what’s missing, what’s actually being used, what’s expired and what’s current.** This makes your organization’s approved technology list actionable, letting stakeholders compare what’s approved for your organization with what you actually have installed, easily see what needs to be phased out, and identify what needs to be renewed or replaced.

- ✔ Compare what you have on your network vs. what your organization thought you had on your network
- ✔ Link legacy systems to new IT portfolio projects for sunset planning
- ✔ Track migration from enterprise to cloud environment
- ✔ Use with asset management solutions such as BDNA to provide real-time reports on out-of-date licenses, software, and other vulnerabilities
- ✔ Create a dashboard that shows the weight of the organization’s investment by software and hardware manufacturers (Microsoft, Intel, etc.)

## Inventory & Asset Management

- ✓ Hardware and Software Categories and Decomposition Ontologies.
- ✓ IT Inventory can be managed with hardware, the software that runs on it, and the versions of that software that are approved by the organization.
- ✓ The approval process can be implemented and managed through the interfaces as well.

## Network Inventory Mapping

- ✓ Network map rendering from IQ repository asset inventory/CMDB.
- ✓ System data including network topology along with the inventory of servers once in the IQ platform can be rendered into a basic network diagram.
- ✓ This provides verification data to architects and quick visual to IT around misconfigured or unconnected hardware in inventory.

## Benefits to Teams & Leaders

Leaders have an immediate holistic view of current IT assets, and can compare what you actually have with what your organization is approved to have

Provides authoritative, truthful asset management data analytics

Provides authoritative list of network or cloud-approved software and hardware

Can be vital component of capital planning exercise

## Request Your Demo

Are you ready to do more with your data? Schedule a live demo with a member of our team to experience the power of the InQusient Platform for yourself Contact [info@inquisient.com](mailto:info@inquisient.com).

### About InQusient

InQusient is a comprehensive enterprise strategic planning and data management solution that unifies hybrid data integration and metadata management, enterprise architecture and technology asset management, portfolio and project management, risk modeling and process optimization in one easy-to-use platform.
